AW

about his agentic systems, WTI Cabs pipeline, Shinra, or his engineering stack.

What did he build at WTI Cabs?

At WTI Cabs (July–Sept 2026), Gaurav served as an AI Engineer Intern. He engineered a production AI pipeline that processes 3,000–5,000 corporate booking emails daily. The system ingests emails, performs structured LLM extraction for passenger and itinerary data, verifies corporate travel policies, and commits reservations directly into an enterprise .NET backend with sub-3 second latency.
